If you're using Moira for the first time, here's the steps to get things set up ready.

Getting set-up - creating a database

Note: You'll need a Google account for this.

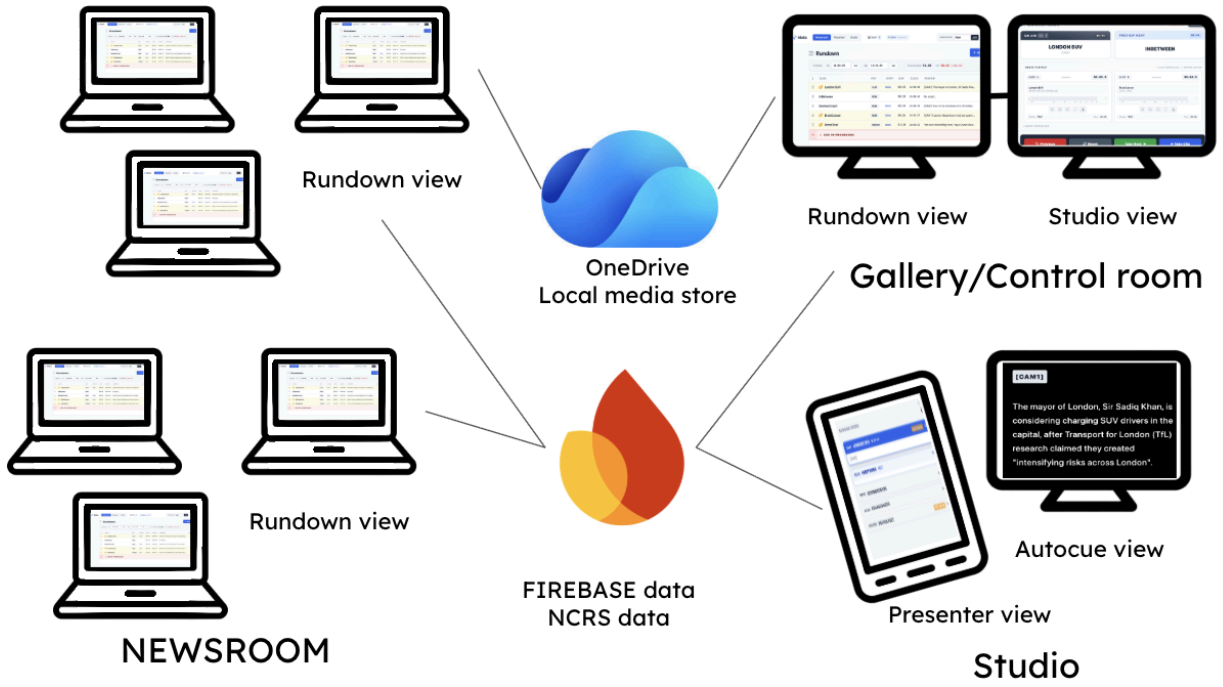
If this is the first time you have ever used Moira you'll need create a Firestore Database. *You'll only need to do this once and you can use it for multiple newsdays.* You can find instructions to do this in the Firestore Setup doc.

Completing that process should generate *firebaseConfig* details. They should look something like this

```
`const firebaseConfig = {`
  `apiKey: "AIza...",`
  `authDomain: "your-project.firebaseapp.com",`
  `projectId: "your-project",`
  `storageBucket: "your-project.appspot.com",`
  `messagingSenderId: "123456789",`
  `appId: "1:123456789:web:abc123"`
`};`
```

Copy and save these for later use.

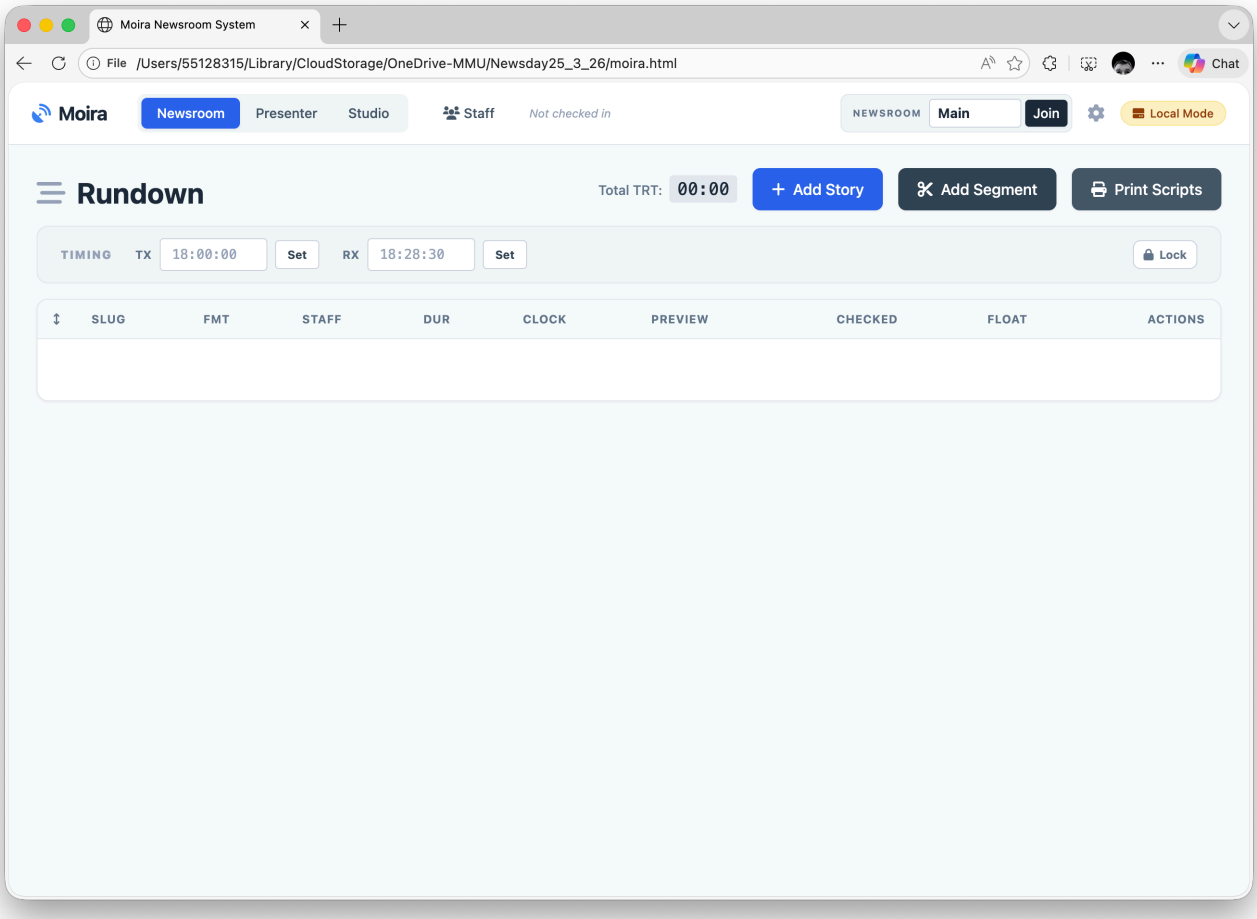
Setting up for a newsday



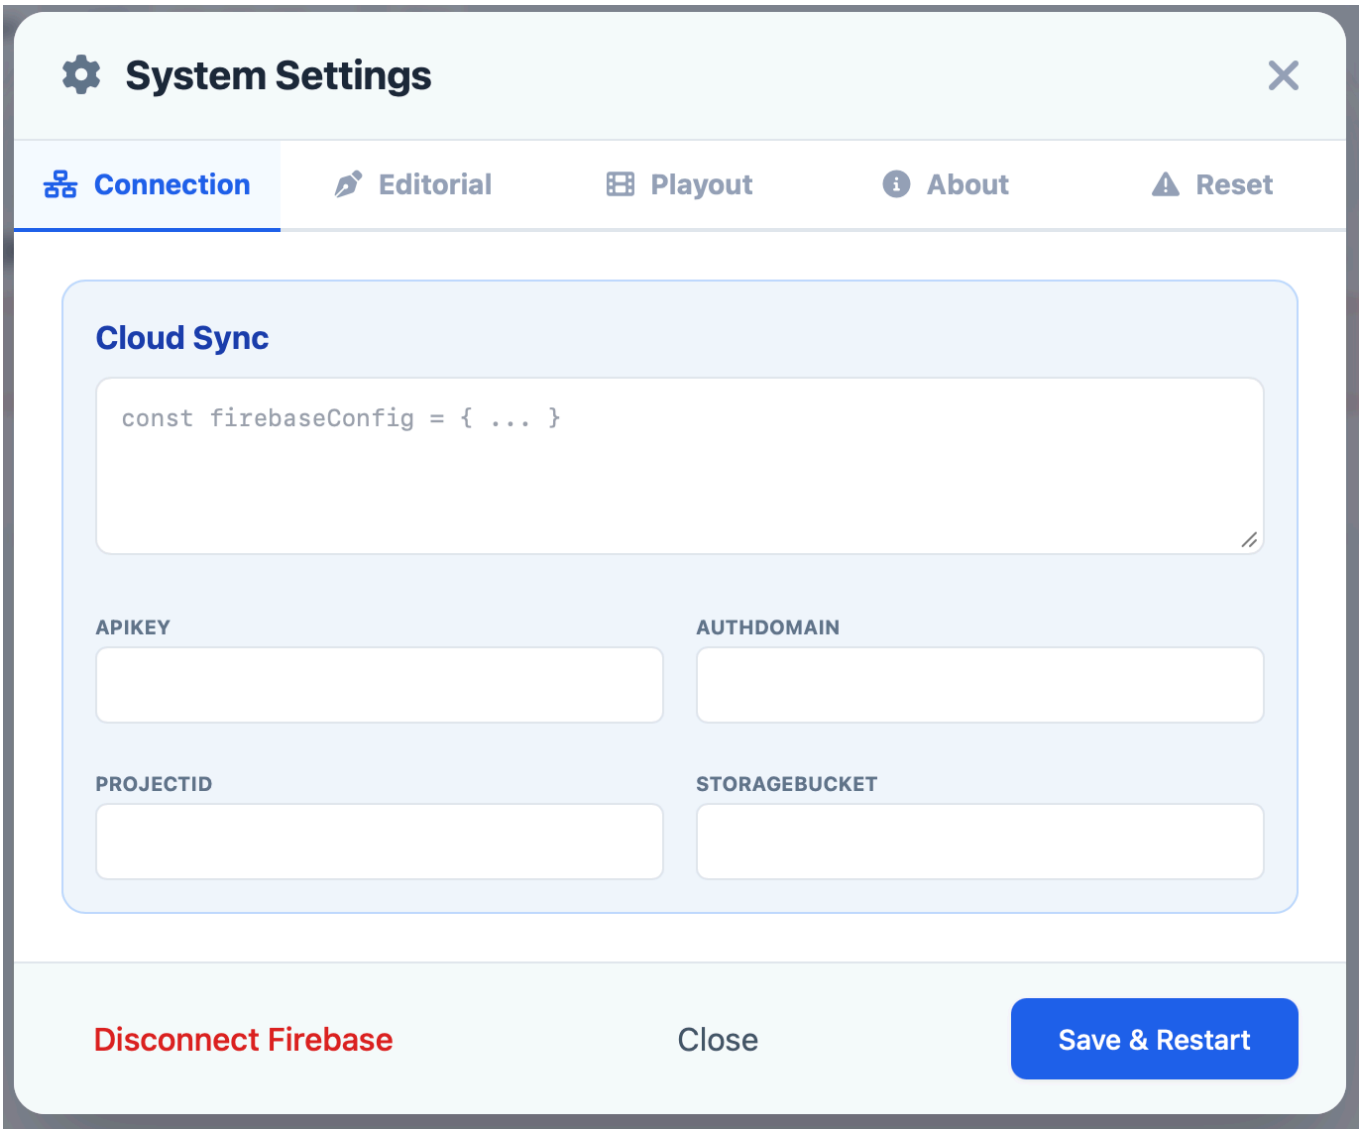
The most effective way to work with Moira on a Newsday is to create a folder on a shared drive. This could be onedrive, google drive or an accessible network drive. This shared drive will be used to distribute Moira to users and also as a place to store media files for playback.

- Create a folder on your shared drive for your newsday session e.g. `Newsday25_3_26`
- Save **Moira.html** into that folder
- Create a sub-folder called `media`
- Open **Moira.html** in your web browser.

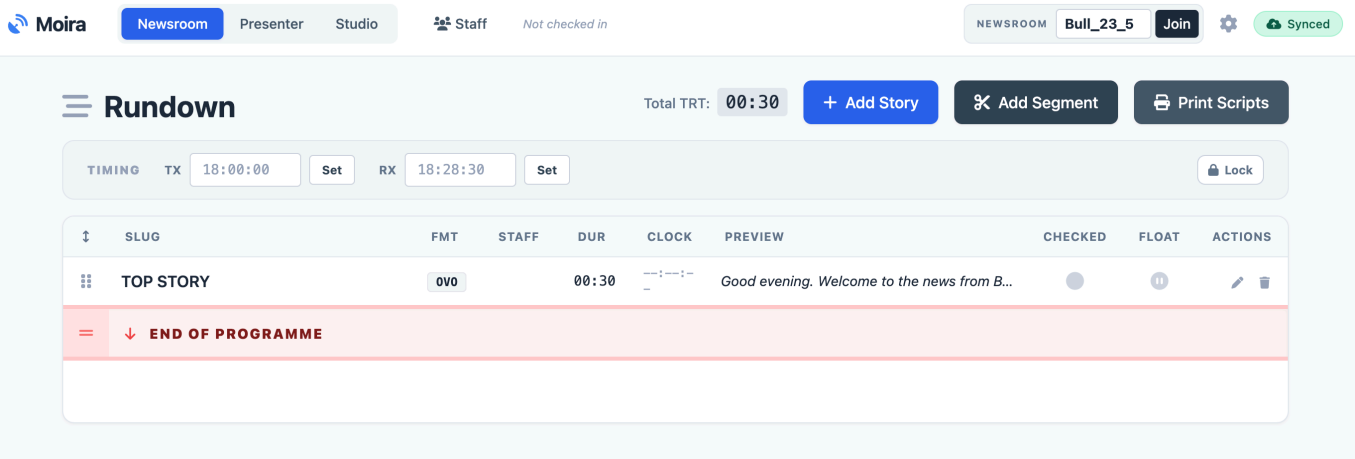
Moira will open in *Local Mode*. You can experiment with all the features in this mode. But nothing will be saved when you close the browser.



- Click the **Settings (COG icon)** in the top-right of the window.



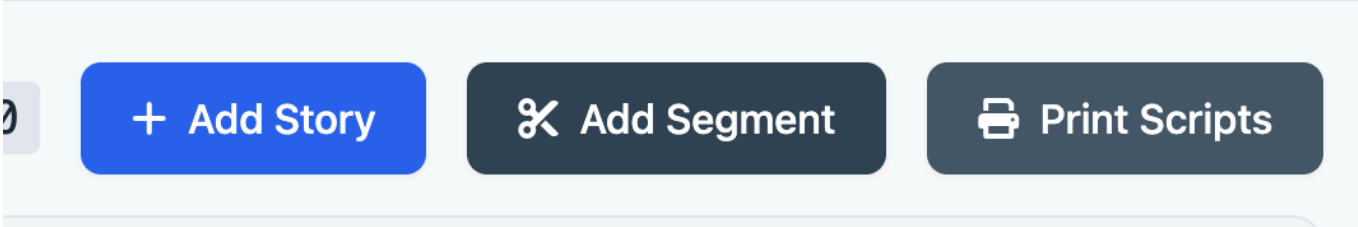
- Paste the *firebaseConfig* you copied into the **Cloud Sync** box. All the requied keys and ID's will be automatically added.
- Click **Save & Restart**
- The browser will refresh the view and you should see Local Mode update to a green Synced badge. That means you're connected to the database and can begin to setup the newsroom.
-



Define the newsroom

Moira manages bulletins by creating **Newsrooms** - one for each bulletin.

1. Add a new newsroom to newsroom box. eg. `Bulletin_24_5_26`
2. Click **Join**.



Setting up the bulletin

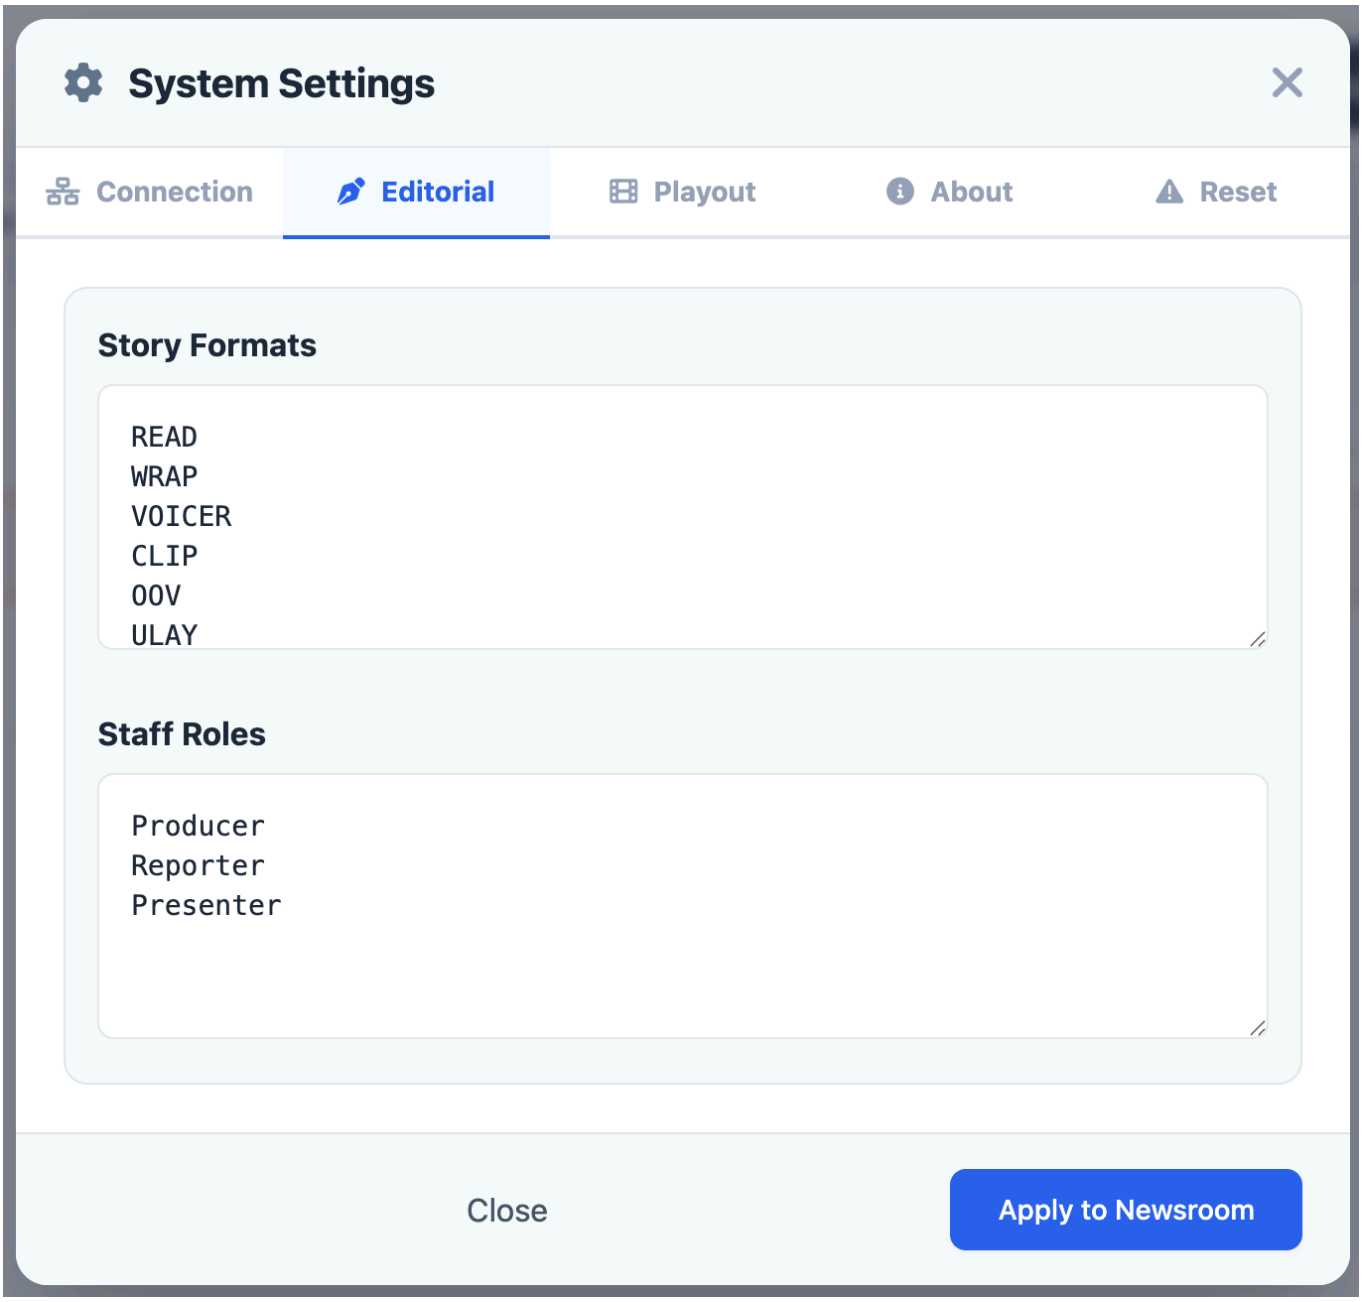
Now you have a newsroom defined, you can set up the basic configuration.

- Staff Roles
- Story formats
- Media playback if required.

These are not interchangeable between newsrooms. So before you run a bulletin, you'll need to create a new newsroom with any adjustments to roles and formats you require.

Staff roles and Story formats

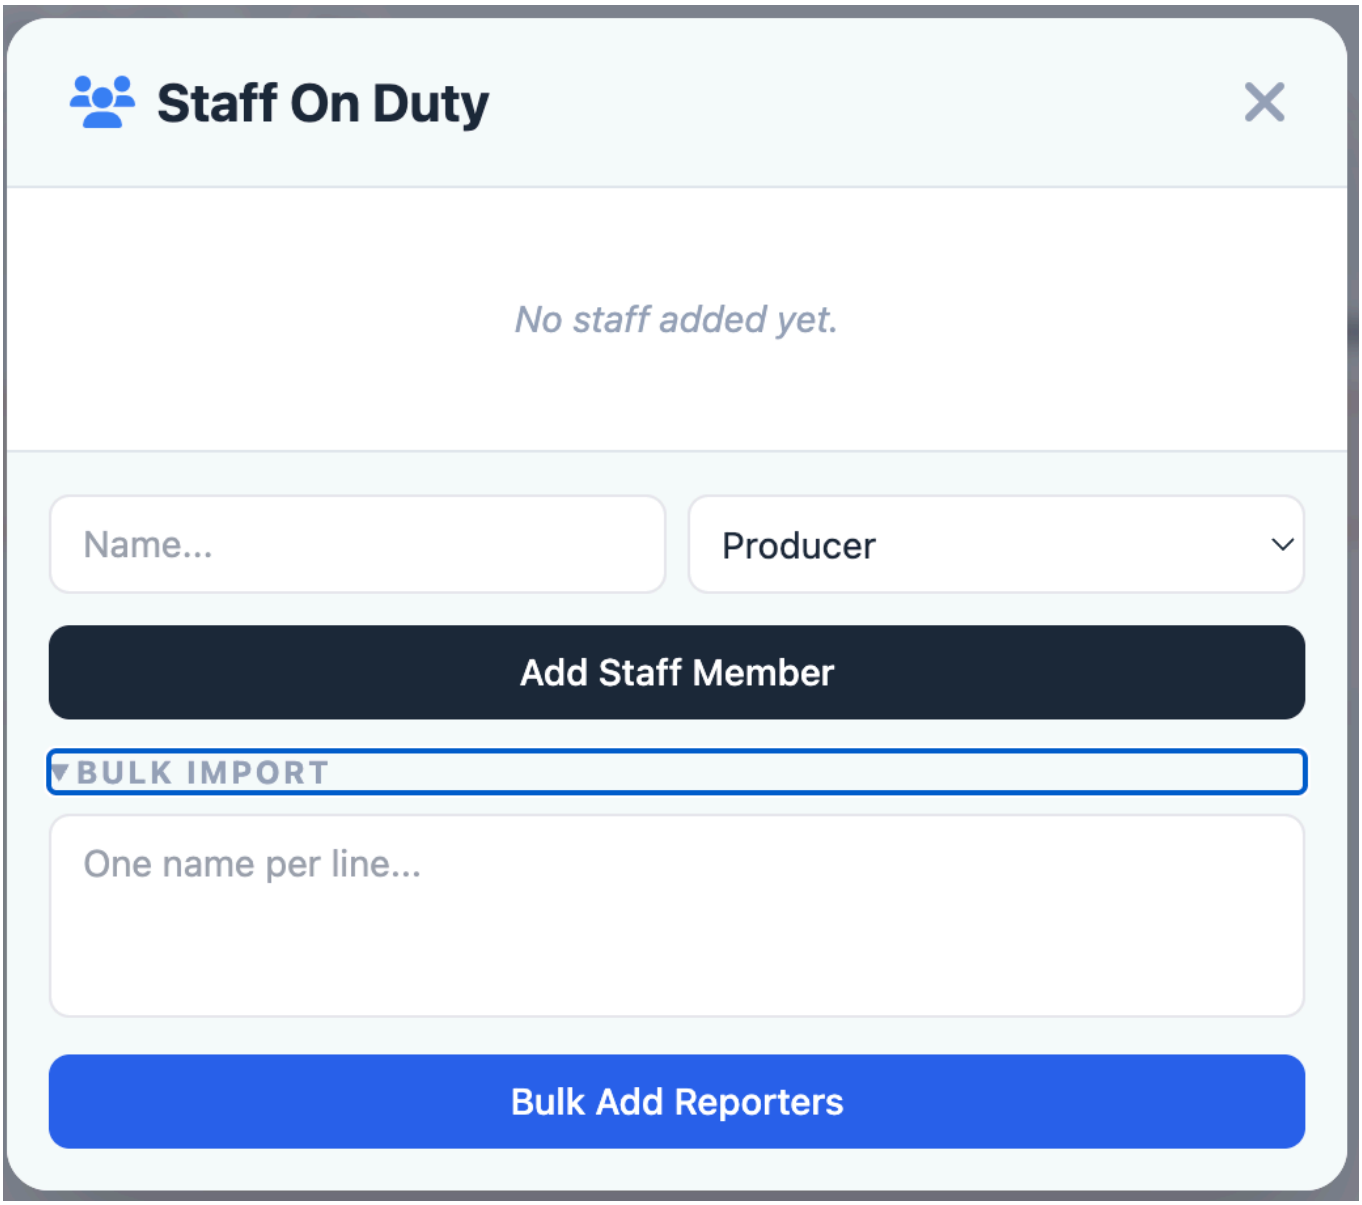
1. Open the **Settings panel** (cog) and switch to the **Editorial** tab



1. Add and edit the **Story Formats** as required. The basic newsroom has a number of preset ones but you can chose your own to suit the terms you use.
2. Add or edit the **Staff Roles** as required.
3. Click **Apply to Newsroom** and then click **Close**

Adding staff

1. In the main Interface click the **Staff icon**

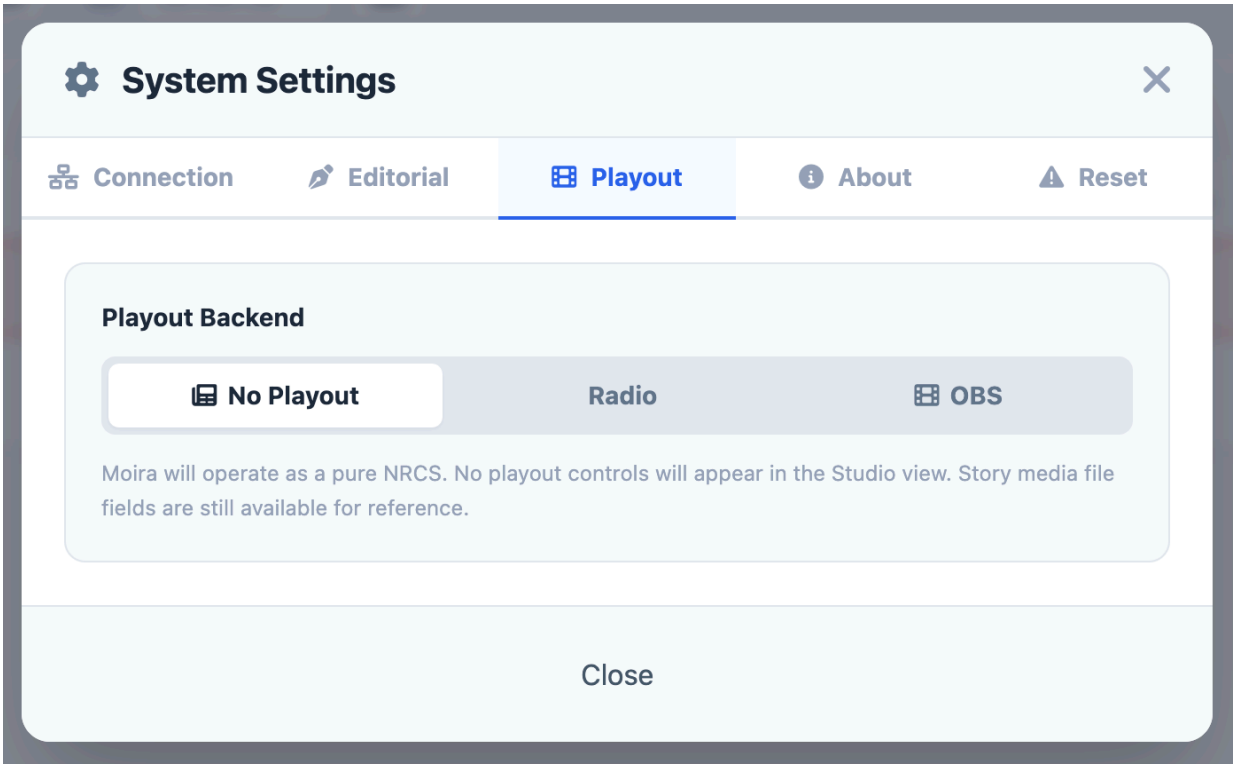


2. Add newsroom managers/teaching staff first as producers and then add students/reporters as required. You can bulk import Reporters - one person on a line. Details can be edited later on.

Setting up media playback.

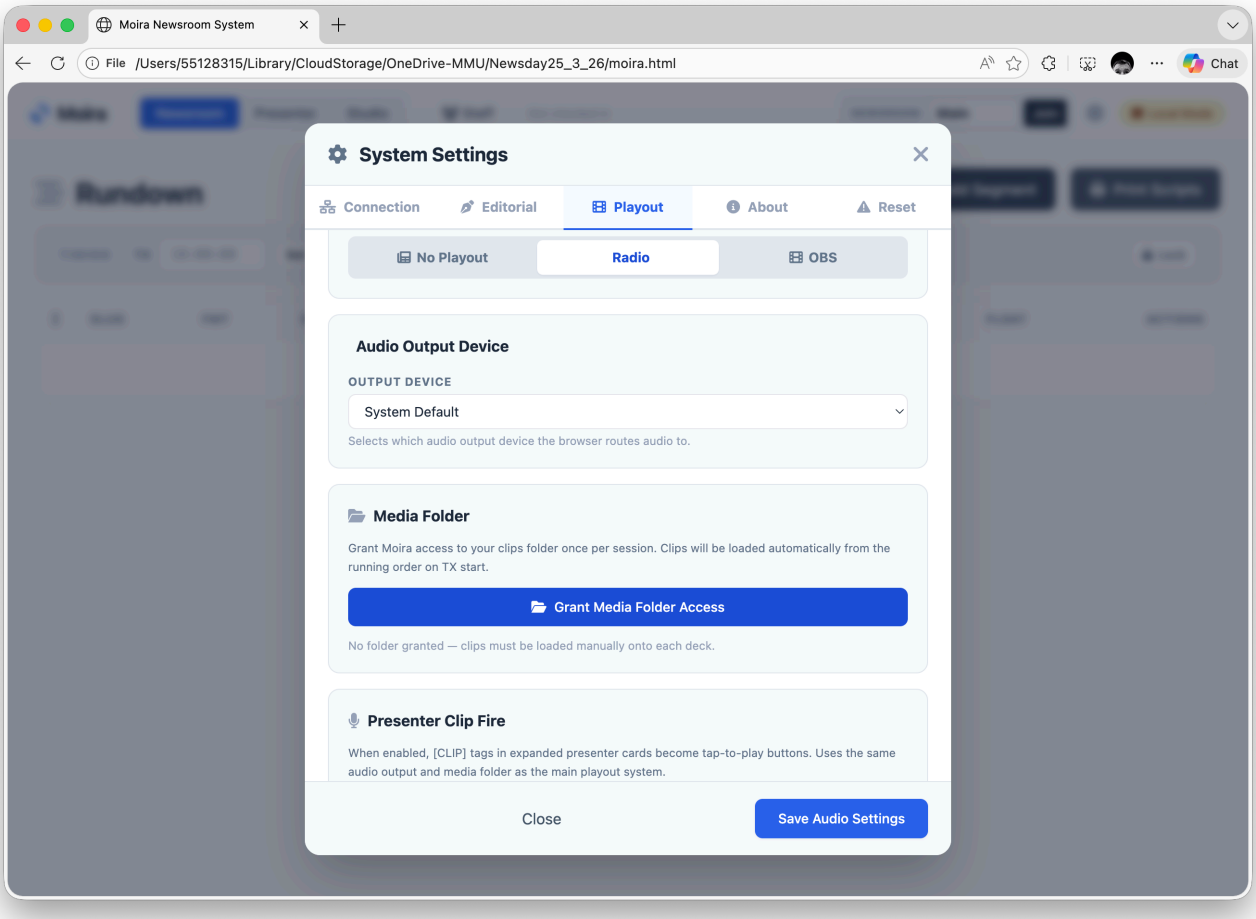
1. If you want to use Moira to simply manage rundowns and script:

1. Open the settings tab, go to **Playout** tab and select **No Playout**



2. If you want to use Moira to also manage media playout, you can select either Radio or OBS. This can be changed at any time. **Note: Moira has a pretty robust audio functionality. The OBS integration is still very experimental**

Using Moira for a radio bulletin

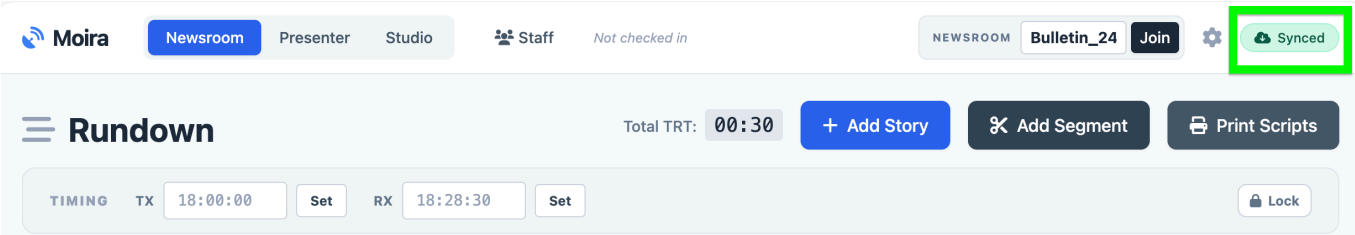


1. Select **Settings > Playout > Radio**
2. Click **Grant Media Folder Access.**
3. Locate the media folder you created earlier.

You can leave everything else at this point.

Generate a pre-configured version for newsroom use

You can now generate a preconfigured version of Moira for newsroom staff to access.



- Once you have set up the newsroom, staff, roles, formats and media, click the green **Synced** badge at the top-right of the page.
- A new file will be created with your settings baked in. It will have the filename `Moira-bulletin`.... appended with your newsroom name. Note: You may be prompted to save it

or it may download to your downloads folder.
- Make sure your copy/transfer that file to your newsroom folder.

If you feel multiple files would be confusing for users, you can now delete the original Moira.html - although we would advise keeping it as a backup

Reporters/Students should now be able to access this file from the shared folder. The only thing they may need to do is grant access to the media folder again. Direct them to:

- Click the cog icon in the top-right of the screen
- Go to **Playback**
- Re-grant access to the media folder

This is a pain, but it is a limitation of using a browser.
